

Urbino 15 LE electric Online premiere

Urbino electric ventures out of town

- **Offers maximum safety**

For drivers, we have designed a wide variety of equipment, featuring innovative assistance systems, cameras instead of mirrors, or an interactive panel, all devised to ensure as calm and secure a ride as possible and overall comfortable operation.
- **Surprises with its flexibility**

Incredibly comfortable in the rear part, where the bus holds pretty seats, reading lamps, air-conditioning and armrests, but at the same time also a practical vehicle with a low-floor front part, which allows it to meet all the needs of passengers with reduced mobility or those travelling with prams or pushchairs.
- **Adjusts perfectly to the operator's needs**

A wide array of interior furnishing and technological solutions allows the bus to meet the challenges of operators of modern cities and suburbs. The integration of the remote fleet management system eSConnect will ensure control over the electric fleet, whereas the preventative service will maintain the good condition the buses.
- **Offers even more room for passengers**

The spacious, light interior of the vehicle can fit up to 65 comfortable seats which make the journey a pleasure. This is the biggest number of seats offered in the Urbino family vehicles of this class.
